

LMP screw pumps for delivery pressures up to 120 bar

Technical data

- Delivery rate
 $Q_{\max.} = 670 \text{ l/min}$
- Delivery pressure
 $p_{\max.} = 120 \text{ bar}$
- Temperature range
 0°C to $+80^\circ\text{C}$
- Kinematic viscosity
1 to $2500 \text{ mm}^2/\text{s}$

Primary areas of use

- Machine tools
- Machining centers
- Central and decentralized coolant and preparation systems
- Booster stations
- Lubricant and hydraulic units
- Among other things

Due to its wear-resistant design, the LMP series is especially suitable for:

- Demanding applications involved in processing difficult to mill materials such as aluminium and stainless steel
- Various precision applications such as in the aerospace industry
- Grinding applications

Media

Fluids with lubricating properties such as

- Oil in water emulsions with at least 4 – 5 % oil
- Cooling und cutting oils

For pure fluids without abrasive or long fibre components

Performance

The LMP screw pumps are offered in various frame sizes. Within one pump frame size, combination with various motors is possible; Performance adjustment in 10 bar increments is standard. The pump part combined with the required motor is the pump type.

LMP: Delivery pressures to $p_{max.}$ = 120 bar
Delivery rates to $Q_{max.}$ = 670 l/min

The performance data is applicable to viscosities ν to max. 20 mm²/s.

Performance data for pressures greater than 120 bar on request.

Design features

Spindles specially hardened	●
Hydrostatic thrust compensation	●
Shaft sealing: Rotary shaft lip-type seal	●
Mechanical seal	○
Screw housing specially hardened	●
Guard ring for rotary shaft lip-type seal	●
Rotary spindle guidance in suction area	●
Leakage monitoring	●
Installation outside the reservoir with foot flange and external leakage feed-back system	○
Pressure regulating valve: Frame size 10-17	●
4-pole motor	○
Regulated speed motor	○

● Standard ○ Optional

Installation and operation

As immersion pumps, the pumps have a 4-hole connection flange with standard connection dimensions for vertical container installation (inside the reservoir).

The immersion depth can be adjusted to fit the respective container sizes by attaching an intake tube.

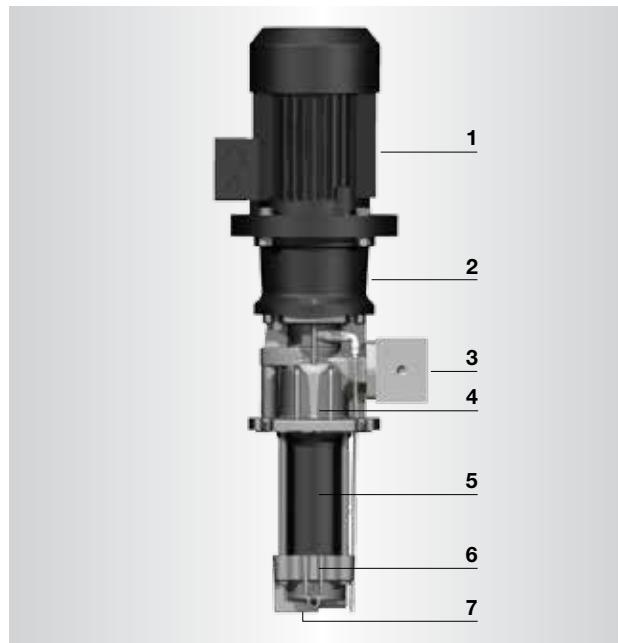

A foot flange is attached to the pump support for horizontal positioning beside the container (outside the reservoir).

Note:

All devices are only to be installed or mounted by a qualified person. The existing safety measures are to be taken into consideration.

Please refer to our operating manual 951-170-018 to avoid errors.

Configuration and function

Configuration of the LMP pumps

Drive (1) and pump unit are connected using a curved-tooth coupling (2) within the pump support. The pressure housing (4) contains the bearings for the drive spindle and its sealing.

The LMP is a self-priming positive-displacement pump. The medium is pumped by a set of spindles (5) in the screw housing. This consists of a drive spindle and two screw spindles. Rotation of the spindles causes the pumped medium to move continually and without pulsation axially from the suction opening (7) in the suction housing (6) to the pressure limiting valve (up to size LMP17) (3) with pressure port.

The special profile formation of the spindles generate sealed chambers with minimum medium backflow and a high level of effectiveness.

Mechanical design

Component	Material
Spindles (screw and spindle and drive spindle)	High performance steel Specially hardened
Screw housing	Cast iron with lamellar graphite EN-GJL-250 surface-treated
Pressure housing	Cast iron with lamellar graphite EN-GJL-250
Intake housing	Cast iron with lamellar graphite EN-GJL-250
Rotary shaft lip-type seal	PTFE
Mechanical seal	Hard metal / FKM (FPM)
O-ring seal	FKM (FPM)
Rolling bearing	With permanent lubrication
Pump support	Aluminium
Intake tube	Steel

Operating conditions

When selecting the type, it should be taken into consideration that the pump's delivery rate is approx. 20% higher than the required system performance.

For pure fluids **none** abrasive or long-fibre components.

Generally acceptable contamination:

- Max. solids content: 40 mg/l
- Max. grain Size: 0.05 mm (50 µm) for machining (lathing, drilling, milling)

Application specific values on request.

Kinematic viscosity: 1–2500 mm²/s;
over 2500 mm²/s on request.

Pumping temperature: 0 °C bis +80 °C

Maximum admission pressure:

- For design with rotary shaft seal: 5 bar
- For design with mechanical seal: 10 bar

Geodesic suction head max. 4 m

Running dry and operation with closed pressure side is not permissible. As positive-displacement pumps, screw pumps have to be protected against overpressure on the system side using a pressure regulating valve.

Switching-on frequency:

The pumps should be used for continuous operation to the extent possible. If this is not possible due to the process, then the pump's constant flow rate should be regulated using a frequency converter or a regulating valve for example.

Electrical specifications

The drive motors adhere to the VDE-standards as well as the European motor standards (DIN EN 60034-1) and the CE label requirements.

Designs adhering to standards outside of Europe such as **CSA**, **UL** or according to special requirements such as those in USA or Japan are possible.

Protection class IP 55
(DIN EN 60034-5)

Direction of rotation * Clockwise,
from the top on the breather side
of the motor.

Insulation class F.B
(DIN EN 60034-1)

Ambient temperature Max. 40 °C
(DIN EN 60034-1) at max. 1000 m o. NN

Electrical parameters ** ≤ 4 kW:
(DIN IEC 60038) 230/400 V, 50 Hz and
265/460 V, 60 Hz

≥ 5,5 kW:
Δ 400 V, 50 Hz and
Δ 460 V, 60 Hz

* Incorrect direction of rotation (counter-clockwise) results in destruction of the pump

** Other electrical parameters on request.

LMP screw pumps with frequency converters

An LMP pump with integrated frequency converter enables optimum usage depending on the application. It adjusts the electrical output to the application's requirements and thus saves energy. Adjustment can be made to various operating points in the characteristics field to configure the pump ideally for the area of application. This adjustment can be made either smoothly or with defined increments as required.

If needed, a single pump with a frequency converter can be used to accomplish the tasks of several pumps (without speed adjustment). Full separation of the motor from the pump allows integration of the speed adjustable operation for retrofitters as well.

Advantages

- Huge output range
- Optimum adjustment to the respective machining process
- Universal adjustability of the pump speed through all pressure ranges
- Frequency converters work almost no loss and are entirely maintenance-free
- Regardless of voltage fluctuation in the power supply
- Speed adjustment ensures effective delivery rate and usage
- Economically convincing, energy efficient alternative to standard solutions
- High dependability
- Long service life
- Quick and simple commissioning
- Convenient integration in machine control
- Compact design

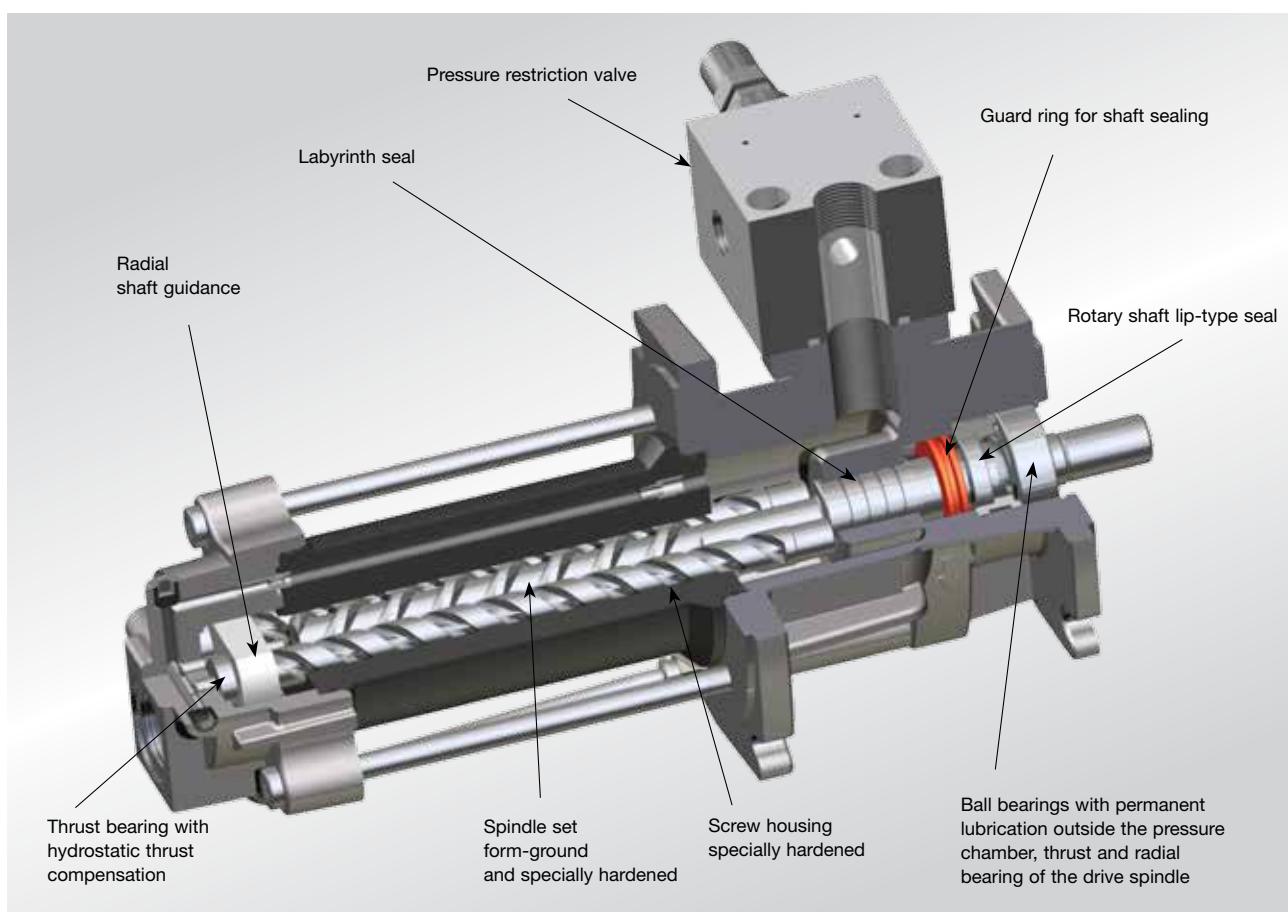

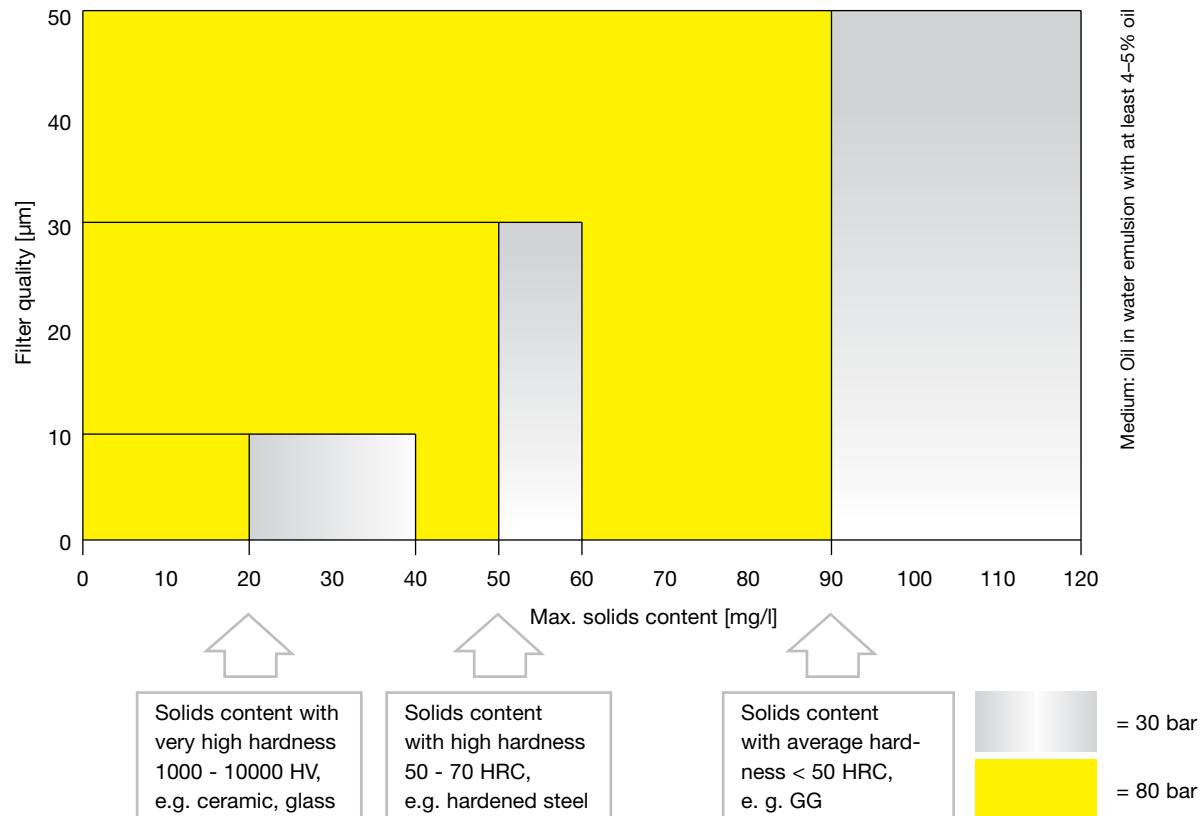

For further information, see → page 20.

* Depending on motor make

Frequency converter

Sustainability

- Up to 70% energy savings can be achieved in practice
- Speed adjustment ensures effective delivery rate and usage
- Lower heat input in the overall system and thus reduced effort required for cooling capacity

LMP 11 with frequency converter

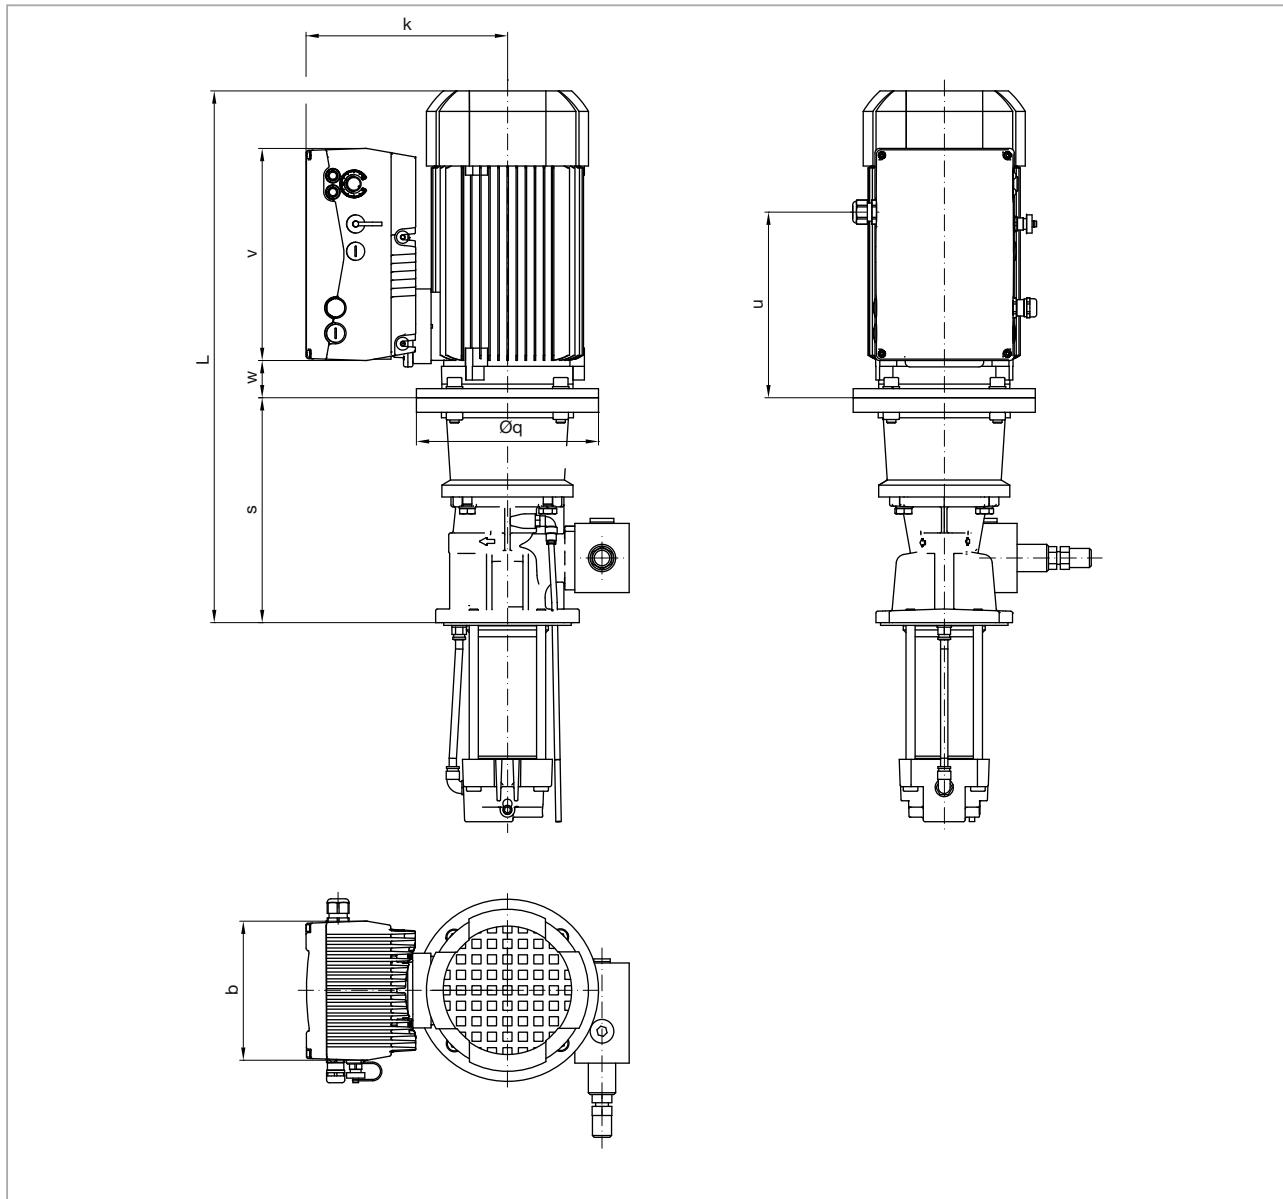

Performance

Medium	= emulsion with at least 4–5% oil
Viscosity	= 1 mm²/s.
Delivery pressures up to p_{max} .	= 10 to 100 bar
Delivery rates up to Q_{max} .	= 5 to 37 l/min
Power requirement	= 0.4 to 7.5 kW

Application

Within the section highlighted in yellow, any operating points are possible with reference to pressure and output (displacement) with a frequency-controlled motor.

Frequency converter – dimensions

Expansion kit for LMP series 10-13

Foot flange for installation outside the reservoir

Features

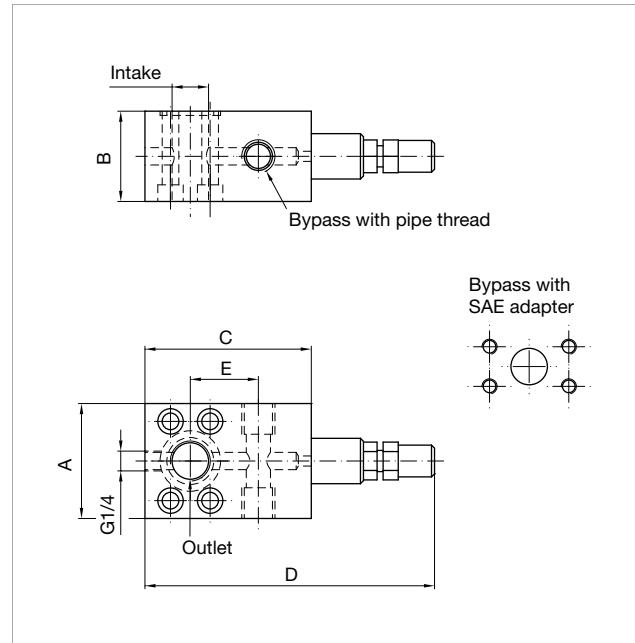

- Pressure gauge for 0-100 bar, 50 mm display, incl. connecting materials
- Flat seal 180 NBR for the reservoir lid
- Pipe extension G 1 for the suction area
- Pipe G1/2 for the bypass return

Features

- Compact space-saving design
- Allows for storage in horizontal and vertical positions
- High load carrying capacity due to solid construction, which is lightweight nonetheless
- Material aluminum

Order number	Motor frame size	Motor rating
HPS2.02	100L; 112M	3; 4 kW
HPS2.03	132S	5.5; 7.5 kW
HPS2.04	160M; 160L; 180M	11; 15; 18.5; 22 kW

HPS2.06	225M	45 kW

DVK pressure regulating valve

Features

- Very compact design
- Variable adjustable limiting value
- Adjustable using tool
- Bypass function
- Optionally with manometer monitoring
- Connection using SAE flange on pump side
- Conductor with pipe thread connection

Medium

Cooling lubricants according to DIN 51524 and oil/water emulsions 1 to 500 mm²/s.

Performance

Delivery pressures up to $p_{\max.}$ = 10 to 120 bar

Delivery rates up to $Q_{\max.}$ = 250 l/min

Temperature T (medium) = 30 to 80 °C

Dimensions

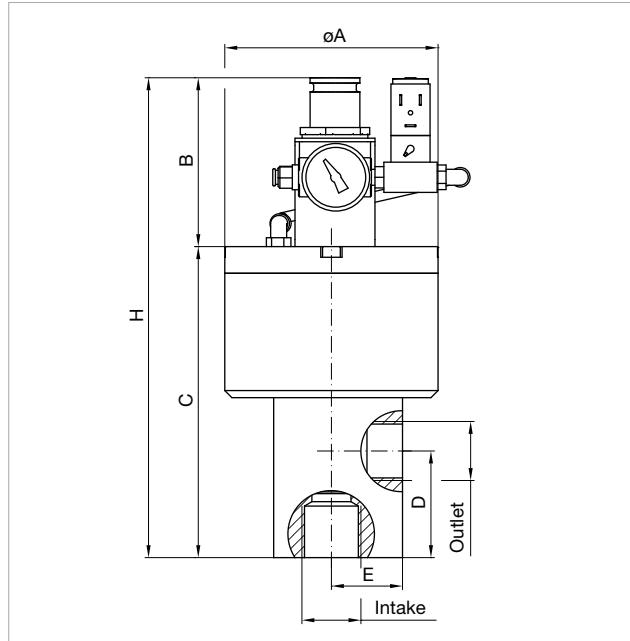

Order number	DVK 3/4	DVK 1 1/4
A	76	98
B	59,7	79,5
C	110	170
D	191,5	235
E	45	74,5
Inlet	SAE 1"	SAE 1 1/2"
Outlet	G 3/4"	G 1 1/4"
Bypass	G 1/2"	SAE 1 1/2" or G 1 1/4"

Advantages

- Direct screw union with the LMP pump
- Very suitable for original equipment manufacturers and retrofitters due to the uncomplicated and quick assembly

Pneumatically controlled DVP pressure regulating valve

Features

- ON/OFF function
- Max. fluid pressure can be regulated using pneumatic pressure (proportional regulation)
- Pipe thread connection

	øA	B	C	D	E	H	Inlet	Bypass
DVP 1	120	95	175	60	40	270	1"	1"
DVP 1 1/4	12	95	180	63	40	275	1 1/4"	1 1/4"

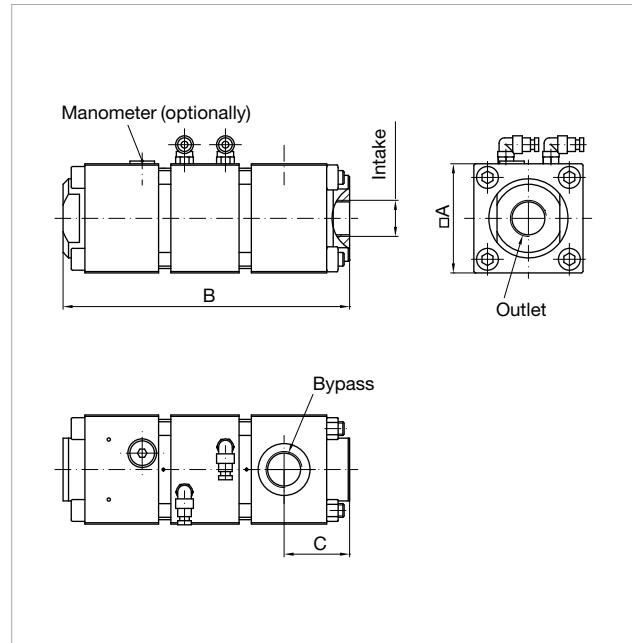

Medium

Cooling lubricants and oil/water emulsions.

Performance

Order number	DVP 1	DVP 1 1/4
Delivery rate Q _{max.}	120 l/min	250 l/min
Pressure range p	5 to 100 bar	5 to 80 bar
Standard ratio	20:1 5 bar standard pressure = 100 bar medium pressure	10:1 8 bar standard pressure = 80 bar medium pressure
Electrical pneumatic valve	24 AC (48 DC) Input power 2 W Standard output G1/8	
Medium temperature	0° C 60 °C	
Ambient temperature	0 °C to 60 °C	
Weight	4.5 kg	5.0 kg

Pneumatically controlled DVS pressure regulating valve

Features

- ON/OFF function
- Max. Fluid pressure can be regulated using pneumatic pressure
- Bypass function
- Pipe thread connection

	A	B	Inlet	Outlet	Bypass	C
DVS 3/4	80	210	¾"	¾"	¾"	48
DVS 1 1/4	100	310	1 ¼"	1 ¼"	1 ¼"	75
DVS 2	130	390	2"	2"	2"	100

Medium

Cooling lubricants and oil/water emulsion, oils with 3–20 mm²/s, emulsion with 5% oil

Performance

Order number	DVS 3/4	DVS 1 1/4	DVS 2
Delivery rate Q_{max.} Emulsion	170 l/min	350 l/min	1000 l/min
Delivery rate Q_{max.} Oil	120 l/min	250 l/min	700 l/min
Pressure range p *	15 to 100 bar	15 to 100 bar	5 to 40 bar
Standard ratio	15:1 6.6 bar Standard pressure = 100 bar Medium pres- sure	15:1 6.6 bar Standard pressure = 100 bar Medium pres- sure	7:1 5 bar Standard pressure = 35 bar Medium pres- sure
Electrical pneumatic valve	24 AC (48 DC) input power 2 W Standard output G1/8"		
Medium temperature T	0 °C to 60 °C		
Ambient temperature T	0 °C to 50 °C		
Weight	4 kg	9 kg	20 kg

* ΔP input and output 1–1.5 bar
